1. Introduction

This document outlines the detailed functional and integration requirements for the Loan Origination System (LOS) implementation at Volvo Financial Services (VFS). The BRD is designed to serve as a comprehensive blueprint for digitizing and streamlining the end-to-end loan origination process, ensuring alignment across Sales, Credit, Operations, and Finance functions. The goal is to support business growth, enhance compliance, and deliver a superior customer and user experience by leveraging automation, integration, and best-in-class workflows.

2. Objectives

The primary objective of this LOS project is to create a unified and modular platform that automates and standardizes loan initiation, assessment, approval, and disbursement processes.

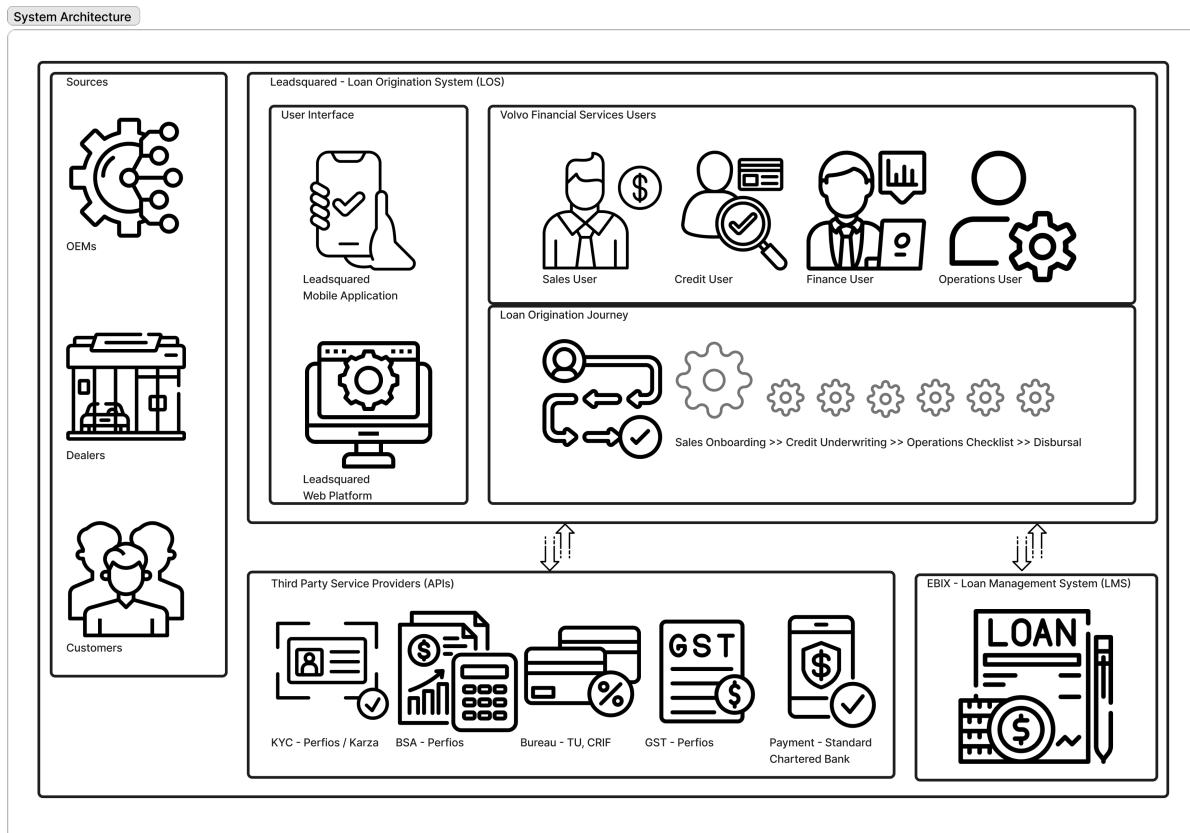

The system will:

- Facilitate seamless collaboration across departments.
- Enforce regulatory and internal compliance.
- Reduce turnaround time (TAT).
- Improve data quality and tracking.
- Enhance customer satisfaction through digitized and transparent workflows.

3. System Overview

The LOS will be built as a modular, scalable solution integrated with key third-party systems (e.g., Karza, MCA, Vahan, Credit Bureaus) to automate verifications and streamline approvals. Each functional team - Sales, Credit, Operations, and Finance will have clearly defined workflows, validations, and responsibilities, ensuring smooth progression of applications from enquiry to disbursement. The system will enable centralized customer identification, exposure mapping, and audit trails, supporting both current and future business needs.

3.1. System Architecture Diagram

3.2. Organization Setup

3.2.1. Volvo Business Divisions

- Volvo Construction Equipment (VCE):** VCE is a core division of the Volvo Group, specializing in the manufacturing and distribution of construction equipment such as excavators, loaders, and compactors. It operates through an independent dealer network and focuses on both machine and attachment financing, typically with single invoice, fully built configurations.
- Volvo Eicher Commercial Vehicles (VECV):** VECV is a joint venture between Volvo Group and Eicher Motors. It is responsible for the production and sales of Volvo and Eicher trucks and buses in India. It manages both direct and dealer-driven sales channels, offering a range of commercial vehicles with varying configurations (chassis, body, fully built), and supports both loan and lease products across its portfolio.
- Volvo Trucks and Buses:** Volvo delivers heavy-duty trucks and premium buses for mining, transport, and city applications in India and globally.

Business Group	Business Division	Product Class
Eicher Group	Eicher Trucks	MDT
		HDT
		LDT
		EV
	Eicher Buses	MD
		HD
		LD
		EV
Volvo Group	Volvo Construction Equipment	Excavator <= 48 Tons
		Excavator > 48 Tons
		Wheel Loader
		Rock breaker
		Ripper
		Pneumatic roller
		Motor grader
		Paver finisher
		Soil compactor
		Asphalt compactor
	Volvo Trucks	Tipper
		Tractor
		Puller
		EV
	Volvo Buses	Bus
		EV
Others	Eicher	SCV

Note: The above is configurable and can be modified anytime during/post implementation basis business requirements.

3.2.2. Volvo Teams:

This section outlines the core functional teams—Sales, Credit, Operations, and Finance—detailing their roles, responsibilities, and interactions within the LOS.

Team	Key Responsibilities	Access Scope	Typical Roles
Sales (Volvo)	Lead capture, application entry, customer engagement	VCE, VCV	ASM, KAM, NKAM, RSM, NSM, Head Sales
Sales (Eicher)	Lead capture, application entry, customer engagement	VECV	Sales Exec, RSM, Sales Head
Credit	Underwriting, bureau checks, exposure mapping	Pan-division	Credit Analyst, RCM, ZCM, Head Risk, MD
Operations	Document verification, compliance, onboarding support	Pan-division	Ops Exec, Ops Manager
Finance	Approval, disbursement, reconciliation, reporting	Pan-division	Finance Exec, Finance Manager, Treasury Manager

3.3. Products

Volvo Financial Services currently offers two major financial products through its loan origination flow: Finance Lease and Loan.

3.3.1. Loan:

Loan is the traditional offering where VFS provides funding for the purchase of vehicles or equipment. The customer becomes the asset owner from day one, while VFS retains a hypothecation or lien until the loan is repaid. Repayment is structured as equated monthly installments (EMIs) covering principal and interest. Customers benefit from immediate asset ownership and are eligible for GST input credit on the asset, typically available within a few months of purchase. This product is available for all business lines and asset types, with flexibility for single or multiple invoices, and supports both retail and strategic customer segments.

3.3.2. Finance Lease:

Finance Lease is a structured leasing solution in which VFS purchases the vehicle or equipment and leases it to the customer for a fixed tenure, usually three to five years. The customer uses the asset during the lease period and is responsible for its maintenance and insurance. Ownership remains with VFS during the lease, transferring to the customer at the

end of the term via a nominal residual payment (often ₹1). Lease payments are treated as rentals, not principal and interest, and the asset is capitalized on the lessee's balance sheet. GST input credit is not available to the customer on asset purchase, however, GST input credit on the rental expense by the customer can be availed. Finance Lease is offered across all business lines, with unified configuration and accounting logic.

3.3.3. Refinancing & Repurchasing:

Below attached is the process flow that will be very specific to Refinancing and Repurchasing. The validations and other addons are mentioned in the same.

Microsoft Word
Document

3.3.4.Product Comparison

Feature	Loan	Finance Lease
Asset Ownership	Customer from day one	Lessor (VFS) during lease; customer after residual is paid
Upfront Payment	Down payment + margin required	Lower upfront (security deposit/advance rentals)
Repayment Structure	EMIs = Principal + Interest	Periodic lease rentals
GST Input Credit	Available upfront on purchase (if business eligible)	Available on lease rentals during tenure
Tenure	Flexible (customer profile & product)	Typically 3–5 years
Accounting Impact	Loan liability + depreciation benefit	Asset capitalized; lease liability recognized
Tax Benefit	Depreciation + interest deductible	Rentals deductible (lessor claims depreciation)
Cash Flow Impact	Higher EMIs, but builds ownership value	Lower rentals vs EMIs, but no ownership till end
Residual Value Risk	Customer bears resale risk	Lessor bears residual risk until transfer
Billing Structure	Asset invoice + loan agreement	Periodic rental invoices + residual at end
Ownership Transfer	Immediate on purchase	At lease end after residual/nominal payment
End-of-Term Options	Already owned	Buy (residual), extend lease, or return asset
Typical Use-Case	Customers preferring ownership, asset build-up, GST benefit upfront	Customers preferring lower upfront cost, flexibility, usage over ownership

3.3.5.Application Variants and Scenarios:

Sales Flow Application Variants:

- a) Volvo CE: Machines always sold fully built (with Attachments). Attachments from 3rd party invoiced separately by the BA typically. Customer configures units based on use-case.
- b) Volvo Trucks & Buses: 100% direct billing. Typically, fully built. But it can also be only chassis or Chassis + Body where body can be either invoiced by the BA or through 3rd Party.
- c) Eicher Trucks/Buses: Sold through dealers, with 3 sales models: -
 - OEM-built body: Fully built with single invoice.
 - Dealer-sourced body: Single invoice via dealer.
 - Customer-sourced body: Two separate invoices, possible split disbursement.

Scenario	Channel	B o d y Source	Invoicing Type	Funding Pattern
A	OEM Direct (Volvo Trucks & Buses)	OEM	Single	Single disbursement
B	OEM Direct (Volvo Trucks & Buses)	OEM + 3 rd Party Body	Separate	Split Disbursement
C	Dealer (Eicher)	OEM	Single	Single disbursement
D	Dealer (Eicher)	Dealer	Single	Single disbursement
E	Dealer (Eicher)	C u s t o m e r - arranged	Separate	Split disbursement
F	OEM (Volvo CE)	OEM + 3 rd P a r t y Attachments	Separate	Split disbursement

- If it involve different brands (Eicher + Volvo), then it must be split into different applications.

4. Current Process (As Is)

The current loan origination process at Volvo Financial Services (VFS) India is only partially digitized, relying heavily on manual interventions, offline coordination, and fragmented tools. EBIX (Retail Lending Suite) is used as the LOS, integrated with EBIX LMS, but primarily serves as a post-sanction data entry system rather than a true end-to-end origination platform. This results in inefficiencies, inconsistent tracking, and extended turnaround times, highlighting the need for a unified digital LOS.

4.1. Overall Process (As Is)

Attaching the PDF file that has the As Is process flow diagram. This was shared by VFS team in the earlier stages.

OLD_LOS_As-Is_Proce
ss.pdf

4.2.Key Characteristics & Shortcomings:

- Enquiry Capture:
 - Most enquiries are routed through dealers or field agents.
 - Data is manually entered into Excel sheets or emailed, increasing the risk of errors and data silos.
 - No direct digital interface for customers; all interactions happen via intermediaries.
- Loan Application Management:
 - Absence of a centralized platform to manage or track applications throughout their lifecycle.
 - Applications are tracked offline, making it difficult to monitor status or bottlenecks.
- Customer Profiling & Document Collection:
 - Sales teams collect documents via email or WhatsApp, with no standardized checklist or digital validation.
 - Frequent back-and-forth for missing or incorrect documents, causing delays.
- Field Investigation (FI) & Bureau Pulls:
 - FI is initiated manually by Sales from Creditone portal post bureau.
 - Bureau reports (CIBIL/CRIF) are extracted by Sales team from Credit One Portal; there is no system-driven trigger or integration directly with the LOS.
 - CreditOne is integrated with CRIF and CIBIL.
- Underwriting & Approval:
 - Credit assessment is performed using Excel models and manual document reviews.
 - Scorecards, financial analysis, and exposure mapping are handled offline, lacking audit trails and automation.
- Operations Review:
 - Operations team reviews the application and then sends the application to the next step for disbursement.
- Disbursement:
 - Offer letter is generated with KFS post Ops approval.
 - Final approval and fund release are coordinated manually by the Finance team.
 - No live dashboards exist to track case readiness, compliance flags, or sanction vs. disbursement gaps.

- Asset & Pricing Master Data:
 - Asset master and pricing data are maintained in Excel or SharePoint, not integrated with the LOS.
 - New models or configurations require manual intervention and offline updates.
- Dedupe & Customer Identification:
 - Dedupe checks are not enforced at the point of data entry; they are performed later by the Credit team, leading to duplicate records and rework.
 - Unique customer identification (UCIC) is generated in the backend, but without real-time validation at the entry stage.
- Contract Handling:
 - For chassis and body funded separately, two contracts are created and managed offline, with manual mapping to ensure correct linkage in the LMS.
- Workflow & Collaboration:
 - Excessive offline coordination and unclear process ownership between Sales, Credit, and Operations.
 - Multiple hand-offs and back-and-forths slow down the process and increase the chance of errors.

4.3.Problem Statements

- Customer onboarding is highly manual, with multiple touchpoints and dependencies.
- Paper-based documentation and email exchanges between stakeholders are prevalent, increasing the risk of errors and lost information.
- Turnaround times for loan/lease disbursement are high due to manual filing, improper KYC documents, and lack of process visibility.
- No direct digital interface for customers; all interactions are routed through dealers or the Sales team, often via offline means.
- No end-to-end digital onboarding solution exists, resulting in fragmented customer journeys and inconsistent data capture.
- Reporting and MIS are limited, with most tracking and analysis done outside the system.
- Integration with third-party systems (e.g., Vahan, MCA, NSDL) is not present; all external checks are manual.

6. Journeys

This section explains the step-by-step journey of a loan application across different stages such as Sales, Credit, Operations, and Finance. To make the flow easy to follow, each stage is shown as a sub-section with a simple diagram. These diagrams display the tabs and sub-tabs of the LOS that are available to the user at that point in time. For clarity, a colour code is used, green tabs are visible and accessible to the user, while red tabs remain inaccessible until a later stage. This way, we can clearly see how the system unfolds stage by stage and how the application progresses across functions.

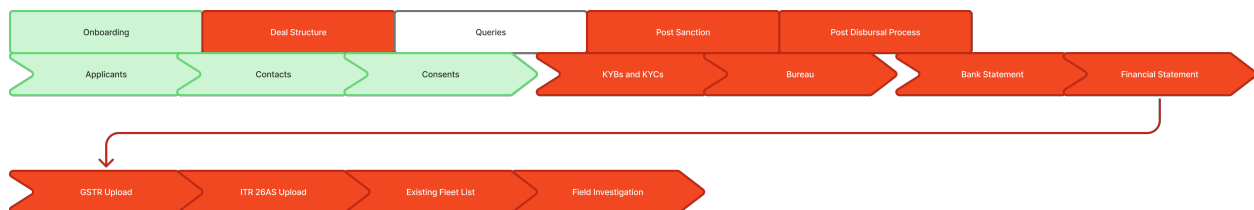

6.1. Application Creation:

- A prospect application is created by the Sales User using a form or is received via APIs from other systems.
- Along with the prospect application, main applicant entity is also created with basic information.
- This is the starting point for all further onboarding steps.

Ctrl + Click here to go to the detailed section.

6.2. Prospect Application (Stage 1):

6.2.1. Flow Diagram:

6.2.2. Description of the flow:

Applicants Tab:

- Additional co-applicants or guarantors can be included if required.
- Applicant details can be updated as needed (for data gathering only).
- System checks for duplicate applicants (dedupe) and maps exposure based on the dedupe result.

Contacts Tab:

- Sales User adds contacts related to each applicant.
- Contact details can be updated or edited as required.

Consent Tab:

- Consent must be obtained from the main applicant using the consent journey (via customer URL).
- Once the applicant provides consent (OTP validated), status is updated in the system.

- Consent can be initiated for any applicant (Co-Applicants & Guarantor) that is added in the system so far.

Ctrl + Click here to go to the detailed section.

Notes:

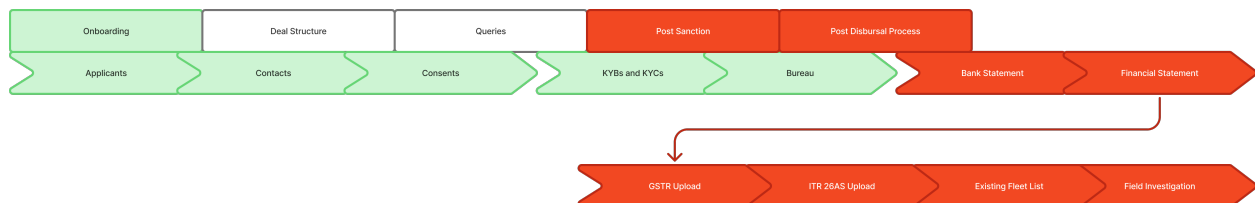

- Applicants, Contacts, and Consent tabs can be completed in any order and in parallel.
- Consent cannot be done manually. It needs to be done via Customer URL only.
- Completion of these parallel steps does not depend on sequential progress.

Transition to Next Stage:

- Consent from the main applicant is mandatory to move to the “Applicant Validated” stage.
- System updates the stage to “Applicant Validated.”
- On “Applicant Validated” status, other modules (KYBs/KYCs, Bureau, Bank Statement, etc.) are unlocked for the next steps in the process.

6.3.Applicant Validated (Stage 2):

6.3.1.Flow Diagram:

6.3.2.Description of the Flow:

KYBs & KYCs Tab

- Enables the user to initiate the Know Your Business (KYB) and Know Your Customer (KYC) process.
- User can choose manual entry or start integrated digilocker journeys for faster, automated data collection.
- Required data for verification includes PAN, Aadhaar, address, and other business/individual documents as per regulatory requirements.
- System performs OCR and database checks on uploaded documents.

Ctrl + Click here to go to the detailed section.

Bureau Tab

- Enables the user to initiate bureau report pulls for all relevant applicants.
- Bureau can be selected manually; bureau call is triggered in the backend.

- Bureau reports are fetched and stored in the system.
- Bureau insights are calculated and stored for further downstream operations (LSQ will suggest based on industry best practices on Insights Generation & Reports).
- Live loan obligations updated as per bureau data.
- System verifies if bureau fetch is successful and eligibility logic is checked automatically.

Ctrl + Click here to go to the detailed section.

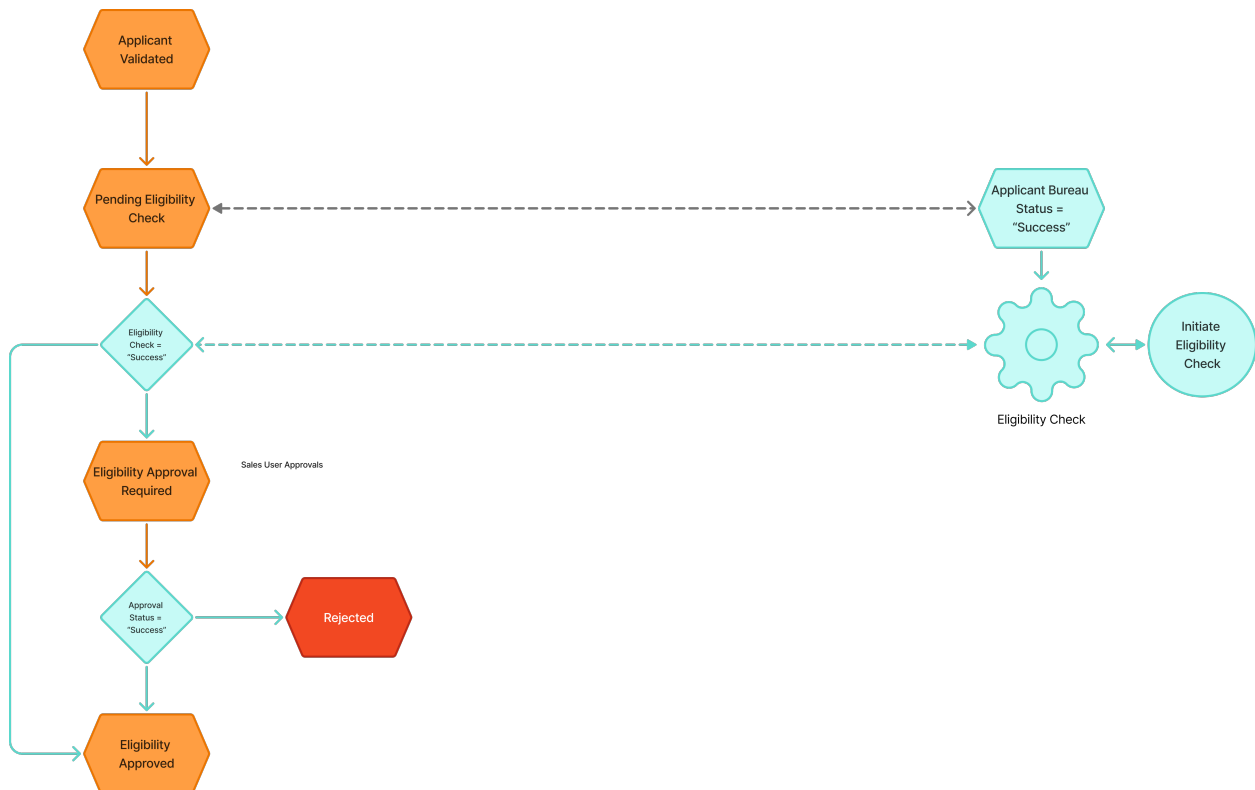

Transition to next stage

Upon successful bureau processing of the main applicant:

- System automatically triggers the eligibility check for the main applicant.
- Application will only progress to the next stage if all compliance and eligibility criteria are met.
- Further modules (e.g., Bank Statement, Financial Statement) remain locked until eligibility is approved.

6.4. Pending Eligibility Check (Stage 3) & Eligibility Approval Required (Stage 4):

6.4.1. Flow Diagram:

6.4.2. Description of the flow:

Transition Trigger

- After successful Bureau checks are completed for the main applicant, the application status moves to “Pending Eligibility Check”.
- System now evaluates the application against defined eligibility criteria based on bureau results and other policy conditions.

Eligibility Check Process

- Automated eligibility logic is run based on internal policies and bureau findings (e.g., CIBIL/CRIF score, overdue accounts, negative markers).

Note: This is still in discussion and will be taken up during implementation directly post conclusion of the discussions.

Flagging Concerns

- If no concerns/alerts are detected, system immediately updates the application status to “Eligibility Approved”, unlocking all downstream modules.
- If one or more concerns/alerts are detected, system flags the exception and transitions the status to “Eligibility Approval Required”.

Eligibility Approval Required Actions

- Sales User is notified of the flagged concerns and user can provide approval with comments that can be reviewed/audited later.
- Based on the check, Sales User can provide whether to proceed ahead or not.
- If rejected, application stage will turn out to be Rejected and the application will be closed.

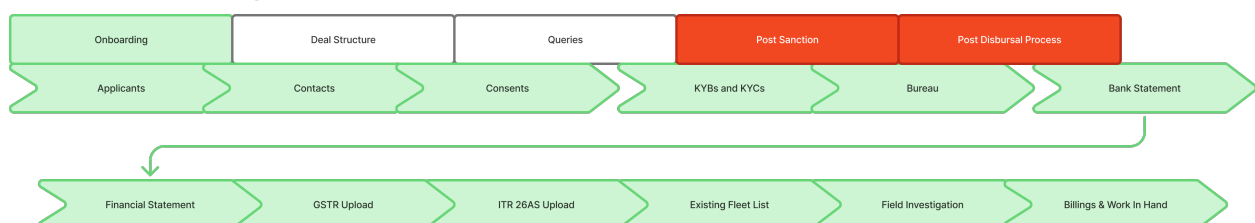

6.4.3. Logics for eligibility check:

Eligibility Criteria -
Bureau parameter.xlsx

6.5. Eligibility Approved (Stage 5):

6.5.1. Flow Diagram:

6.5.2.Description of the Flow:

Transition Trigger

- System validates application after successful Bureau check and confirms eligibility as per policy rules.
- Application status updates to “Eligibility Approved.”

Newly Unlocked Tabs

All downstream tabs for document and data collection are now enabled for the Sales User, specifically:

- Bank Statement {Account Aggregator(APIs still in discussion) or manual upload}
- Financial Statement (PDF upload and validation from Perfios or other APIs – APIs still in discussion)
- GSTR Upload (Upload/select GSTR statement)
- ITR 26AS Upload (Upload/select ITR 26AS files)
- Existing Fleet List (Manually add existing fleet details, if applicable)
- Field Investigation (Select FI vendor and verification address as required)

Bank Statement Tab

- Sales User initiates consent for Account Aggregator fetch or uploads bank statements manually.
- System processes and validates all uploaded/collected bank statement data.

Financial Statement Tab

- Sales User uploads financial statement PDFs.
- System runs automated validation (e.g., through Perfios APIs).
- Financial Statement Analysis (FSA) report is generated and stored.
- FSA ratios are auto calculated for credit analysis.

GSTR/ITR Upload Tabs

- Sales User can upload GSTR statements and ITR 26AS documents as per lending requirements.

Existing Fleet List Tab

- Enables manual addition of existing fleet data for applicants where relevant.

Field Investigation Tab

- Allow user to select the FI vendor and specify applicant verification address.
- System triggers email to the selected FI vendor to conduct the field investigation.

Billings and Work In Hand Tab

- Allows sales user to upload the defined format of Billings and Work In-Hand.
- System will be capturing the datasets/attributes uploaded by the sales user for the credit executive to review.
- This will later be used for CAM preparation.

6.6.Pre-Credit Checklist (Post-Eligibility Approved, Pre-Credit Review)

Purpose and Timing

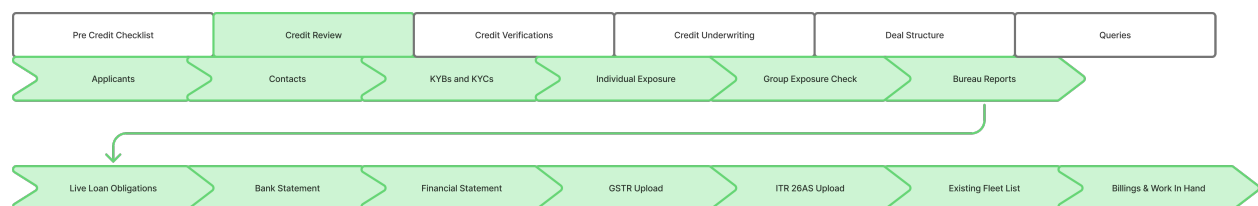

- This checklist stage activates immediately after the Eligibility Approved status and after the application is routed to the Credit Team.
- Ensures a view to the credit team to make sure all mandatory documents and required fields are captured by the Sales User - driving “First Time Right” and minimizing back-and-forth.

Sales User Responsibilities

- Review a system-generated checklist of essential items.
- Mark each item as “Verified,” “Pending,” or “Not Applicable” as per the documentation and data collected.
- Upload or ensure presence of core documents (KYC, financials, billings, statements, fleet info, etc.).
- Address any flags or deficiencies that the system highlights before submission to Credit.

6.7.Credit Review (Stage 6):

6.7.1.Flow Diagram:

6.7.2.Description of the Flow:

Applicants

- View all applicants added by Sales, along with dedupe check status.
- Update applicant details if needed (e.g., add Group Code).

Contacts

- View and manage all contacts, including those pulled from MCA (directors, shareholders).
- Add new contact for non-individual applicants.
- Update contact details if information changes.

KYBs and KYCs

- Review all KYC and KYB information added by Sales.
- Check completeness and correctness of fetched data sources.

Individual Exposure

- Review all VFS exposure/LAN details of the main applicant (fetched from LMS).
- Add individual exposures manually if not available.

Group Exposure Check

- Review all VFS exposure/LAN details for the applicant's group companies or related entities (fetched from LMS).
- Add group/related party exposures manually if needed.

Bureau Reports

- See all Bureau Reports with insights fetched by Sales and calculated by the system.
- Initiate new bureau pulls or re-pull if required.

Live Loan Obligations

- View all active loan obligations created using bureau reports.
- Add loan obligations manually if applicant data is missing in bureau.
- Update obligation status to ensure correct ratio calculations.

Bank Statement

- Review all Bank Statement Analysis (BSA) reports for applicants.
- Update BSA parameters to improve accuracy of calculated financial ratios.

Financial Statement

- Review all Financial Statement Analysis (FSA) reports for applicants.
- Update FSA parameters for more precise ratio calculation and evaluation.

GSTR Upload

- View GST returns uploaded by Sales.
- Update/verify GST values based on uploaded content for assessment.

ITR 26AS Upload

- Access ITR 26AS files uploaded by Sales.
- Update the ITR 26AS datasheet as needed to support calculations.

Existing Fleet List

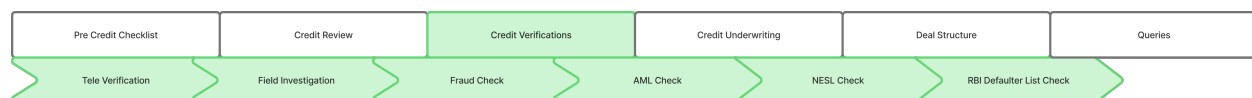

- Review the existing fleet details as updated by Sales and verified from Vahan using API Integration (as applicable).

Billings & Work In Hand

- The tab will contain the datasets/attributes that were captured from the billings/work in hand uploaded by the sales user for credit user to review.
- Update any of the datasets as needed.

6.8.Credit Verifications (Stage 7):

6.8.1.Flow Diagram:

Ctrl + Click here to go to the detailed section.

6.8.2. Description of the flow:

Tele Verification

- Review all tele-verification (TVR) updates made for the loan application.
- Update TVR status and disposition, add remarks or supporting details.

Field Investigation

- Review findings from field investigations conducted for the applicant.
- Update field investigation status: mark as completed, escalate negative findings, or add comments for any exceptions.
- Attach documents if applicable.

Fraud Check

- Review fraud report.
- If a match is found:
 - For high risk: Option to reject the application.
 - For low/moderate risk: Raise a deviation with rationale, which is then routed as per the deviation matrix.
- All actions and outcomes must be documented with remarks.

AML Checks

- Conduct AML/PEP checks manually external to LOS.
- Upload required reports/screenshots and add compliance remarks.
- Record “Match” or “No match.” For matches, follow deviation workflow as per policy.

NESL Check

- Review NESL default reports.
- Upload summary reports, tag with applicant PAN, and record match outcome.
- If default is found, escalate as deviation; if clear, move to next step.

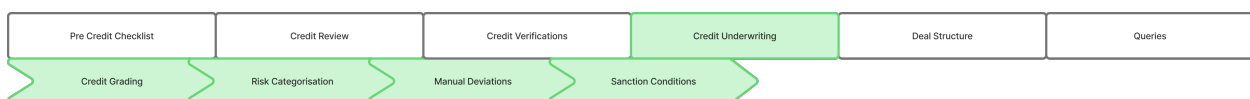

Assumption: Details fetched via API is sufficient. Manual check and upload options are feasible.

RBI Defaulter List Check

- Check applicant against the latest RBI defaulter list (file/manual as applicable).
- Upload annotated evidence document.
- Update status: “Match” (flag for compliance rejection or deviation), or “No match” (proceed).

6.9. Credit Underwriting (Stage 8):
